

» DOLLIES

A new design, with rounded edges and corners, thus there is no danger of cuts; easy to clean and great resistance. Our design and manufacture comply with the ISB recommendations for the transportation of meat boxes according to DIN / ISO 55423 (Euro-Norm).

All our dollies contain a patented plastic fiber-based protection that has been specially developed for the Meat Industry to protect against bacteria. It is easy to clean these surfaces with a high-pressure cleaner.

They are resistant to air and water; they can withstand temperatures until +100°C and -40°C.
